

We deliver specialist software and data solutions, helping organisations solve complex quality and engineering data challenges.

JetSoft's Expertise

JetSoft develops software solutions that improve how companies capture, communicate and utilise quality control and inspection data, particularly non-destructive testing (NDT) information. Our products help manufacturers, laboratories, test houses and asset managers centralise and understand inspection data, enabling data-driven process improvements, enhanced efficiency, and better decision-making across operations.

1

Specialist focus on quality & NDT data

Software designed specifically to tackle the challenges of managing and leveraging inspection and quality data across various platforms and equipment.

2

Flexible solutions

We can integrate with a wide range of data sources and systems without conflicts of interest.

3

Expert-driven, bespoke development

Providing technical expertise with customisation and consultancy to support unique operational work flows and business needs.

Role in SmarterLink

Through our OverSeer and WorkStream products, JetSoft provided the means to manage and organise the SmarterLink flow of data.

Facilitating the SmarterLink communication path and creating a **process orchestration system** to automate work flow through the applications

Interconnecting Scantron's metrology devices with Machine Intelligence's advanced analysis software

Providing a platform for data management, process control, and reporting
